

FLECK VALVES

SXT boards with white instead of blue retrolighting

Dear customers,

Our supplier is struggling to deliver us **blue** LEDs which are currently used on all valves equipped with **SXT boards**, ie [5600](#), [9000](#), [9100](#), [9500](#), [2750](#), [2850](#) and [2910](#), and we will soon be out of stock.

We believe that a board with a different retrolighting color is better than no valve at all, so we will implement a mitigation plan, which will allow us to continue to run our production smoothly.

Starting **mid of September**, as soon as our stock of blue LEDs will be finished, we will start to produce SXT boards with **white instead of blue retrolighting with no impact on performance of the valve**. You might receive a mix of both versions as leadtime can vary from one valve to another.

This deviation will last as long as the supply of blue LEDs will remain unstable.

We will come back to you when we will be able to use blue LEDs again.

We thank you for your patience and understanding.

Best regards

Pentair marketing team Europe
