

FLECK VALVES

NXT2 - New IP67 sealed power supply

Dear customer,

We are glad to inform you that all our commercial/industrial valves with NXT2 controller, ie [2750](#), [2850](#), [2910](#), [3150](#) & [3900](#) will be equipped with a **new sealed power supply** starting from October 3rd as production date. This will be a running change.

This new transformer is designed for professional applications since it is **sealed**, meaning the power cord can't be detached. This allows **higher IP** protection and ensures **100% safety** for end users. It is also equipped with an **EU connector**.

The former transformer reference 44415 will therefore be replaced by new reference **44604** "NXT2 Inline Transformer 230V-24VDC-50/60".

In the meantime, we confirm that pricing on valves and spare part will remain the same.

As always, thank you for choosing Pentair.
