

## Fleck industrial valves 2750, 2850 and 2910 valves back to grey covers

Dear customers,

Following our [IB 756](#) sent in June, we are pleased to announce that we finally received from our supplier the missing grey covers needed to produce the Fleck 2750, 2850 & 2910 industrial valves.

Fleck 2750

Fleck 2850

Fleck 2910

You will therefore temporarily receive those valves with their standard grey covers instead of black ones

Why temporarily? You might remember that due to difficulties in sourcing these grey covers over the last years, we decided to stop producing valves with grey covers and replace those by **black covers** instead.

The moment of this change will be mid-2023 and is yet to be confirmed, as it is subject to stock depletion. From that moment, we **will only produce valves with black covers**.

We trust this will have a positive impact on our lead-time performances.

We will contact you again as we approach the cutoff date.

Thanks as always for choosing Pentair
